Old School PBP

When Steve from Old School PBP in Perth decided to open his own performance, blast and paint shop he had many things to consider. But Surface Preparation was at the forefront of his mind. Steve knows from years of experience, that paint adhesion and a top quality finish begins with a perfectly prepared surface.

Anyone who knows their way around a panel shop will tell you that there is more than one way to remove paint, bog and rust. Dry blasting, rubbing back by hand, acid dipping and paint stripper are all methods that have been around since Noah was a boy but they all have their limitations and is exactly why Steve was after something that was not only faster but cost effective and safer to the vehicles he was working on.

What he didn't realise at the time was that once word got around the Rapidblast SD60 would actually add income to his business through people wanting various parts blasted.

During Steve's decision making process he flew to Adelaide to meet with the Quantum Blast team and see the SD60 in action which not only gave him greater confidence in the product but in the guys behind the blaster.

“ The fact that Daniel and Luigi had years of blasting experience and knew every fitting and hose on the blaster made me realise that the Rapidblast was the unit for my business. They make a decent coffee too! ”

With the Rapidblast SD60 in his workshop, Steve does not have to transport cars offsite to blasters who stored them in the weather until they “got to it”. His sidekicks haven't complained about sore hands and shoulders from having sand it manually. The Rapidblast range is designed for ease of use. Minimal moving parts results in less wear and tear and virtually no down time. The fact that it is 97% dust free makes it safe for employees and a boon for the environment.

Call Quantumblast today to discuss how the Rapidblast range of wet abrasive blasters can help increase your businesses profits today.
